OMAN DATAPARK

CASE STUDY

Cloud Services for a Leading Islamic Bank

Context

A leading Islamic bank wanted to introduce their business in Oman with a faster time to market. They also wanted a scalable Data Center that was cost efficient to win their investor confidence.

Challenges

- A new Data Center to launch operations in the fastest possible time
- Cost effective and scalable IT infrastructure to enable a profitable business case
- Business Continuity Process (BCP) and Disaster Recovery (DR) plans required by government and insurers

Solution

- ODP's Tier 3 Data Center and Scalable Cloud Platform deployed a scalable new data center in record time
- Managed Services from ODP blocked cyber attacks and answered support tickets from first day of implementation
- BCP and DR planning resulted in plans for a SLA based RPO and RTO

Benefits

- Complete OPEX Model which helped with investment protection for the Islamic bank
- Time to market requirements were met, which helped the bank to launch services as planned
- DR capable redundant infra, including hardware and Sever resource management for fast recovery and failover
- **Total Cost of Ownership (TCO) saving approx. 40%** vs deploying own data center
