

CASE STUDY

Disaster Recovery for a Leading Cement Company in Salalah

Benefits

- The cement company recovered operations after the cyclone in record time
- ODP's Managed Services helped the company to focus on their core services while we enabled their DR and BCP
- "Behind the Scenes" IT supports an organization whose primary function is not IT or tech-related. Cost efficiency preserves the company's IT budget for more direct business operations

Context

A leading cement company in Salalah had to brace itself for an eminent natural disaster - Cyclone Mekunu, and wanted to plan ahead to ensure business continuity.

Challenges

- Cement company needed reliable IT services for normal operations and disaster scenarios
- IT security challenges included cyber security and physical security
- Disaster Recovery and Business Continuity Plans were crucial to company's activities

Solution

- Systems deployed in ODP's Tier 3 Data Center for multi-site redundancy in the event of a disaster
- Dependable and scalable performance compared to previous systems
- Reliable cloud infrastructure for zero unplanned outages
- Disaster Recovery and Business Continuity plans with lowest RPO and RTO
